

# Moderna's Scary Deployment of Covid 19 Vaccines

By Craig Paardekoooper

On page 3 is a table showing

- Column 1 : Moderna batch numbers
- Column 2 : Number of adverse reaction reports for each batch

Column 2 is ordered largest first

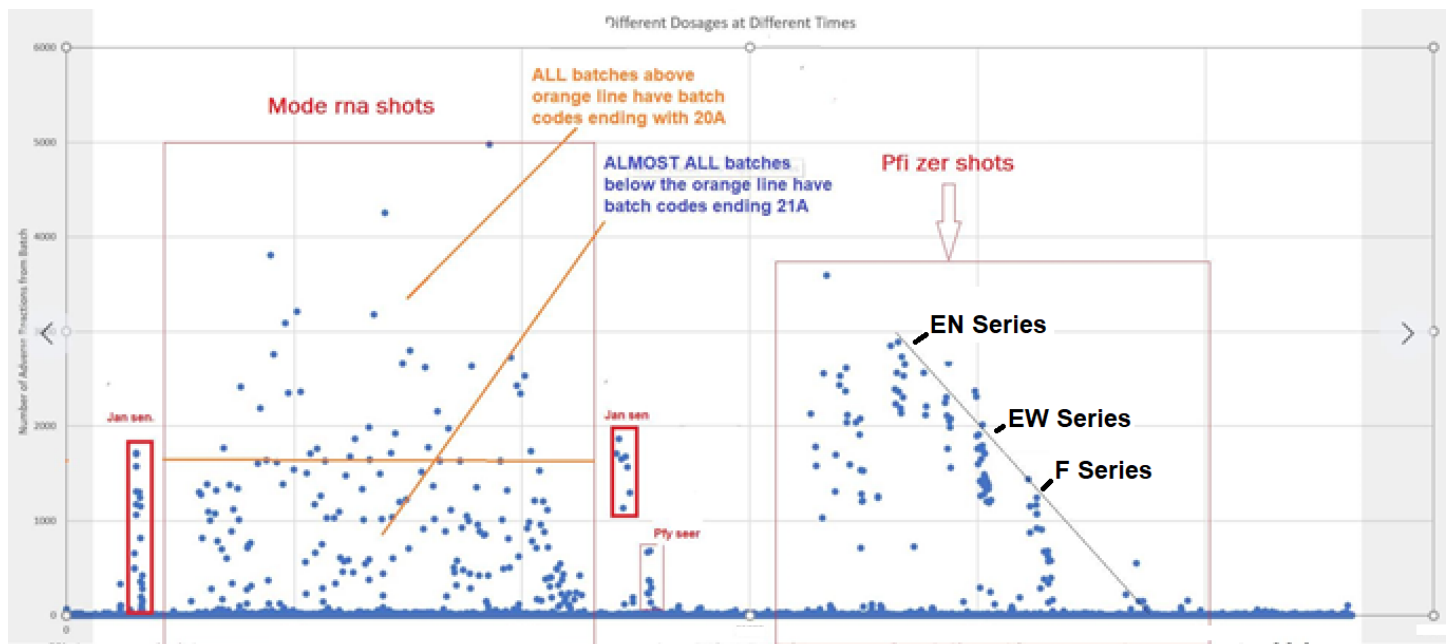

1. Notice that all the most toxic Moderna batches end with the letters 20A. These batches have a toxicity from 1780 – 5000 x the mean
2. Below the 1780x toxicity level, there is an ABRUPT change in Moderna batch codes – they end with 21A instead.

## What this looks like

It looks as if the most toxic batches all received a specific code within their batch numbers – all of the Moderna batches above the orange line are in excess of 1780 x toxicity, and their batch numbers end in the letters 20A.

29 different batches were deployed within this range of toxicity by Moderna.

The majority of toxic batches below this line – in the toxicity range 100-1700x have batch numbers ending in the letters 21A

**X-Axis : Batch codes arranged alpha-numerically (note :x-axis is NOT a temporal sequence. Rather it is an alpha-numeric ordering of the batches.**

**The Pfizer batch codes cluster into distinct alpha-numeric clusters - each cluster associated with a different toxic level.**

## Observations

THE BATCHES RANKED MOST TOXIC FROM 1 TO 29

28 out of the 29 most toxic Moderna batches end in 20A

The exception ends in 20-2A which just happens to be very similar to 20A

These batches all have a toxicity in the range 1780 - 4985 x

THE BATCHES RANKED MOST TOXIC FROM 30 TO 59

23 out of 30 of these Moderna Batches end in 21A

7 out of 30 of these Moderna Batches end in 20A

These batches have a range of toxicity of 1237 - 1767 x

THE BATCHES RANKED MOST TOXIC FROM 60 TO 89

25 out of 30 of these Moderna Batches end in 21A

4 out of 30 of these Moderna Batches end in 20A

1 out of 30 of these Moderna Batches ends in 21B

These batches have a toxicity range of 894 - 1215 x

THE BATCHES RANKED MOST TOXIC FROM 90 TO 119

28 out of 30 of these Moderna Batches end in 21A

1 out of 30 of these Moderna Batches ends in 20A

1 out of 30 of these Moderna Batches ends in 20 -2A

These batches have a toxicity range of 568 to 889

THE BATCHES RANKED MOST TOXIC FROM 120 TO 149

27 out of 30 of these Moderna Batches end in 21A

2 end in 20-2A

1 ends in 93902

These batches have a toxicity range of 321-566 x

THE BATCHES RANKED MOST TOXIC FROM 150-179

20 out of 30 of these Moderna Batches end in 21A

1 batch ends in 21-2A

1 batch ends in 93906

1 batch ends in 93901

3 batches are unknown

These batches have a toxicity in the range 121-297x

In the table that follows –

- the first column are the Moderna batch/ Lot numbers
- the second column is the number of adverse reaction reports for that batch/lot found in VAERS database.

The batches are sorted with highest number of adverse reactions at the top.

If number of adverse reaction reports is an index of toxicity, then you can see that there is a wide variation in toxicity – with some batches/lots being 50 times more toxic than others.

Its unfortunate if you happen to get a bad batch – your chances of death or permanent disability are about 100 times higher.
